Rub Some DIRT In It: An Immune Dysregulation Approach to Infection

7th Annual CHOP Immune Dysregulation Symposium

Leonard and Madlyn Abramson Pediatric Research Center

Chop.cloud-cme.com

This symposium hosted by the CHOP Multidisciplinary Immune Dysregulation Team is intended for clinicians, researchers, and those who care for patients with complex multiorgan immune disease. It precedes the Clinical Immunology Society meeting in Philadelphia to synergize with common activities and themes. This symposium will explore immune dysregulation driven by infection and review knowledge on disease pathogenesis and best practices for therapeutics. The event will include cutting-edge talks, a debate on therapeutic decision-making, provocative cases, and more. Keynote speakers include:

- **Jeffrey I. Cohen, MD** — Chief of Laboratory of Infectious Disease and of the Medical Virology Section at the National Institutes of Health.
- **Manish Butte, MD, PhD** — Division Chief of Immunology, Allergy, and Rheumatology and professor with tenure in the Department of Pediatrics at University of California, Los Angeles.
- **Carolina Lopez, PhD** — Professor of Environmental Medicine and BJC Investigator in the Department of Molecular Microbiology at the Washington University School of Medicine in St. Louis.

In this full-day hybrid seminar, attendees will gain an understanding of:

- Diagnosis, treatment, and overall approaches for immune dysregulation conditions
- Improve knowledge and proficiency on various infectious disease topics
- Research and clinical care of infectious diseases in the immunocompromised host

An invitation with registration and event details will circulate in early 2025.
